

PARTH BHATT

Security Architect & AI Safety Engineer

+91 8920948990 | paarthbhatt37@gmail.com | Faridabad, India | [Portfolio](#) | [GitHub](#) | [LinkedIn](#) | [X](#)

Security Architect and AI Safety Engineer interning at **DRDO (SAG), Ministry of Defence, Govt. of India** — conducting penetration testing on classified government infrastructure. Specializing in LLM security, autonomous threat systems, and offensive tooling. 4× hackathon winner. Top 6% globally on TryHackMe.

TECHNICAL SKILLS

Offensive Security: Penetration Testing, Web App Security, Vulnerability Assessment, OSINT, Exploit Development, OWASP Top 10.

Defensive / AI: LLM Security, Prompt Injection Mitigation, Threat Intelligence, SOC Operations, Agentic AI, MCP.

Tools: Burp Suite, Metasploit, Nmap, Wireshark, Docker, Linux (Kali/Debian), Git, PostgreSQL, Redis.

Dev Stack: Python, TypeScript, JavaScript, C++, Next.js, React, Three.js, Node.js.

EXPERIENCE

Cyber Security Intern | DRDO (SAG), Ministry of Defence, Govt. of India | Jun 2026 – Jul 2026

- Conducted whitebox and blackbox web application penetration testing; identified vulnerabilities and delivered proof-of-concept exploits on classified government-grade systems.
- Surfaced critical attack vectors across SAG division infrastructure using industry-standard offensive methodologies.

Cybersecurity and AI Intern | Cisco Networking Academy × NIIT Foundation | Jul – Aug 2025

- Trained on threat detection pipelines, network defense architecture, and AI-driven security analysis.

Web Developer Intern | LaunchED Global | Feb – Apr 2025

- Delivered production dashboards in React.js; applied secure coding practices across the development lifecycle.

Technical Team Member | TEDxNIIT University | Aug 2024 – Feb 2025

- Built official event website and led technical infrastructure over a 7-month university-scale engagement.

PROJECTS

Entropy Firewall | Python | Open Source

- Architected a production-ready LLM firewall intercepting AI requests in real time with sub-millisecond latency.
- 28+ detection patterns across 8 OWASP categories with Redis-backed rate limiter and PII redaction engine.

Atreides Framework | TypeScript | Agentic AI

- Built an autonomous agent execution framework with long-context memory compaction and threat-resilient workflow isolation.
- Engineered for high-reliability agentic pipelines where security guarantees and state continuity are hard requirements.

Guardiant — AI Code Security Scanner | TypeScript, Docker, Node.js

- Multi-agent vulnerability scanner for AI-generated code that surfaces zero-days traditional static analysis misses.
- 8-agent parallel scanning architecture with an orchestrator and research-driven analysis engine.

ACHIEVEMENTS & CERTIFICATIONS

- **2nd Place, Hackfest 2.0** (GDG Cloud New Delhi, Feb 2026) — \$850 prize; shipped a live AI product in 24 hours among 1,000+ participants.
- **Winner, MCA Eagles' CodeNest 2025** (Top 3, App Category | Devpost) — Recognized for innovative engineering under competition pressure.
- **1st Place, Design Dojo** (siNUsoid V8, NIIT University) | **Hackorate** (siNUsoid V9, NIIT University) — Two additional hackathon wins in 2025.
- **Top 6% Globally** on TryHackMe — SOC Level 1 and Junior Pentester paths; active CTF participant.
- **9 Industry Certifications** — Cisco (Junior Cybersecurity Analyst), ArcX (Threat Intelligence), CISA (ICS Security ×3), TryHackMe, GitHub Foundations, DevTown (XSS Defense).

EDUCATION

B.Tech in Computer Science and Engineering | NIIT University | 2024 – 2028
